Preserving Family Memories & Photos

How to Scan, Label & Protect Vintage Family Albums & Letters

1. How to Scan Old Photos With Your Phone (Glare-Free)

• Place the photo flat on a table near indirect natural window light (turn off overhead ceiling lights to prevent shiny glare!).

• Hold your phone directly parallel above the photo, or use the free 'PhotoScan' app which automatically removes corner glare.

2. How to Label Digital & Physical Photos So Stories Aren't Lost

• Always record the 'Who, When, Where & Occasion' (e.g., '1964_Summer_Grandma_Rose_Virginia_Beach').

• If writing on the back of physical prints, use a softarchival pencil near the bottom edge—never a ballpoint pen that presses through!
